HX6 SYSTEM

Telos

Easy to understand set controls

 See the video at bswusa.com/HX6

Advanced 6-Line Talkshow System

The Telos Hx6 features advanced dual hybrids and a full suite of audio processing capabilities to deliver superb caller audio over POTS or ISDN phone lines from even the most problematic connections. A VSet6 phone controller (sold separately) connects via Ethernet to provide system control. Its large, colorful VGA LCD displays provide intuitive operation and setup, while exclusive animated Status Symbol icons give producers and talent line/caller status at a glance. The system offers flexible I/O options to meet most any need.

The included XScreen Lite call screening software from Broadcast Bionics gives screeners and hosts plenty of information and control using sophisticated visual talkback.

VSET6	6-line phone controller (sold separately)	List \$795.00
VSET12	12-line phone controller (sold separately)	List \$1,049.00

Multi-Studio VoIP Phone Broadcast System

The Telos VX VoIP phone system plugs into Axia IP-Audio networks to connect multiple channels of audio and control via a single Ethernet RJ-45. It uses standard SIP and RTP protocols to work with your VoIP-based PBX or SIP-trunking telco service to direct up to 16 hybrids. It can also connect to traditional telco lines via gateways. VX comes with VX Producer software (or XScreen Lite from Broadcast Bionics).

The **VX Engine** is where all hybrids are housed and where call control and audio processing occurs. I/O is only limited by network bandwidth and throughput, resulting in a capacity of up to 80 available incoming lines.

The **VSet (VX Director)** offers an LCD color display that instantly lets talent know what's going on. Available in three versions, it can handle up to 12 phone lines and provides line status, caller information and fader assignments at a glance.

Directs up to 80 lines of phone traffic!

12-line Modular Telephone Systems

The Telos Nx12 is a powerful 12-line phone system offering state-of-the-art hybrid technology with support for both ISDN and POTS phone lines. It sports four advanced Telos hybrids and comes equipped with analog or AES inputs/outputs.

Note: If you order analog I/Os, two hybrids are accessible. With digital I/O models, four hybrids are accessible. Each of Nx12's four hybrids is equipped with its own Omnia AGC and noise gate to make caller-to-caller consistency better than ever, no matter how high or low the caller's gain is.

NX12 SYSTEMS:

It's easy—we're always here to keep you going.

Your callers
have never
been closer.

STAC VIP brings your callers closer to you in three invaluable ways. First, it allows you to take wideband calls from SIP computer and Smartphone apps. This gives your show HD Voice quality making calls sound better thereby increasing listener TSL, loyalty and ratings. It's especially easy to set-up. Just send your regular contributors a web link and before you know it, STAC VIP will put you well ahead of the competition. Secondly, STAC VIP allows your callers to connect via their legacy medium of choice - there are no barriers. There is full integration to your IP PBX and POTS, ISDN or T1 gateways.

STAC VIP
VoIP TELEPHONE TALKSHOW SYSTEM

Thirdly, there is the fully integrated, intuitive and elegant web-based graphical user interface. STAC VIP provides a superior level of caller management. Screener and host can view caller details, exchange notes, chat and of course, connect, hold, drop or air calls as the host requires - even from a remote site. *Contact us for more.*

Call BSW at 1-800-426-8434 for your best price on COMREX.

STAC Chart

Powerful VoIP Talkshow System

Comrex STAC VIP smoothly integrates legacy POTS lines with VoIP technology to deliver a new way to manage telephone calls for talk shows, interviews and contests. Besides taking traditional POTS calls, it also handles calls from HD Voice-capable telephones and smartphone apps.

Complete with the STAC IP Call Screening and Control Interface, the STAC VIP Caller Management system will even integrate with your VoIP PBX system.

- Processes up to 12 incoming VoIP calls on a single DSL line utilizing telephone grade G.729 audio compression
- Easy extension sharing and integration with SIP-based PBX systems
- Accepts incoming wideband voice calls from VoIP telephones, wideband voice capable Smartphones and soft codecs
- Easily accommodates legacy POTS/ISDN
- Analog and digital I/O

BROADCAST BITS

Telephone Systems

Think about the amount of program source material that comes through your telephone hybrid news reports, traffic updates, local sports events, and the callers that make up the bulk of your local talk programs. Does your telephone audio sound the best it can?

If the Governor came into your studio to be interviewed, you would use a quality mic and the best mic processor you have. Important voices deserve to sound their best whether they originate in-studio or on the phone.

By using the same techniques that apply to studio mics, you can make a noticeable improvement to a phone caller's sound. Any of the popular voice processors (Symetrix 528E, Vorsis M1, Aphex 230, and dbx 286A) are well-suited for telco use. Just place it between the hybrid's caller output and the console's line input.

The particular functions that improve telco sound are:

Downward Expander — Reduces the background noise when caller is not actually talking

Compressor — Keeps the level consistent whether the caller is local or from the next planet.

EQ — Emphasize the upper and lower frequencies and shape the sound to something more pleasing. Parametric EQ is especially versatile. Aphex 230's Aural Exciter and dbx 286A's HF Enhance circuits both do a good job of adding some "sparkle" to the caller's voice with no negative effects.

The callers won't suddenly sound like they are in-studio. But they will be more detailed and consistent.

"Now let's go to Bill in Kansas City. You're on the air! what's on your mind?"

State Of The Art Digital Hybrids

Available in single (x1) and dual (x2) hybrids, and with analog only or analog and digital I/O, the Telos Hx Series offers superb hybrid performance.

- Call screening and line-hold features
- Front-panel send and receive audio metering

Telos

High Performance Digital Hybrids

Comrex's digital hybrids provide the highest quality audio interface between your telephone line and audio equipment. Common features: balanced XLR inputs and outputs; adjustable AGC and caller ducking; selectable auto mix-minus; auxiliary and headphone monitor outputs; remote control. **DH20** The DH20 offers the superior separation of a top-of-the-line digital hybrid at a very economical price. It provides selectable automatic gain control and caller ducking. Both the DH20 and the DH22 offer remote control

DH22 The DH22 offers the same functionality as the DH20 but in a dual configuration. **DH30** The DH30 adds more capability through the addition of AES/EBU inputs and outputs, interfacing with the latest digital and analog consoles. It also provides acoustic echo cancellation with simple front panel controls and remote control capability. See all three online at www.bswusa.com.

"You won't believe the difference"

INKEEPER1RX

Low Noise Digital Hybrids

The JK Audio Innkeeper1x digital hybrids now offer lower noise and even better echo cancelling performance. They also add an RS-232 remote interface using simple ASCII protocol (cable included). Use the Innkeeper1RX to bring in high-quality audio or interviews from your telephone line. This rackmount single hybrid uses a 16-bit digital signal processor to continuously monitor the phone line and audio signals to deliver better separation and to effectively prevent transmit/receiver crosstalk. This proprietary, dual-convergence echo canceller algorithm can achieve excellent separation, typically exceeding 50 dB, without any setup and without sending a noise burst down the line. Also available in Innkeeper1X desktop model. Optional remote controls available. JK Audio's Innkeeper 4 squeezes four independent digital hybrids into a 1RU space. The front-panel keypad, display, and handset jacks provide easy speed dialing and call setup, and balanced XLR output jacks contain only the caller's voice. You also get remote control and LED status indication and it even stores 50 names/numbers. The Innkeeper 2 is a dual hybrid version (also with LED screen). For details on each of the four models, please call or go online.

JK Audio

Connects Two Hybrids Across Six Phone Lines

The Concierge switch core, a key component of JK Audio's modular family of talk show system components, can connect two hybrids across six phone lines. The switch matrix routes six incoming analog phone lines to JK Audio Innkeeper 1rx or Innkeeper 2 digital hybrids. Concierge also offers music on hold input, auxiliary phone integration, and intuitive call control. Two Concierge switch cores can be bridged together, providing six additional phone lines for a two hybrid, 12-line system. You can add up to eight Guest Module control surfaces to provide remote control of the switch matrix over CAT5 cable.

JK Audio

Bluetooth Desktop Interface

The JK Audio BlueKeeper interfaces to your cell phone like a Bluetooth wireless headset. Simply connect your favorite microphone and headphone and enjoy an immediate improvement at both ends of the call. The professional microphone preamplifier provides a dramatic improvement in sound quality to the caller (or back to the station if you are away from the studio). The caller audio comes in loud and clear over the convenient front-panel headphone jack.

For recording interviews, BlueKeeper allows you to maintain superb separation between your voice and the caller. The stereo output jack on the back of the unit provides your voice on one channel (in full fidelity) and the caller's voice on the other channel.

"Provides sound just like any thousand dollar model"

INNKEEPERLTD

Intuitive Digital Hybrid

The JK Audio Innkeeper LTD digital hybrid connects audio signals to a standard analog telephone line without the transmit/receive crosstalk common to analog hybrids. Its Digital Signal Processor continuously monitors both the phone line and audio signals to deliver excellent separation, typically exceeding 50 dB, without any setup and without sending a noise burst down the line. An auxiliary telephone is only required to place outgoing calls.

- Auto-Answer/Auto Disconnect for use in IFB and monitoring applications
- Other applications include telephone interviews, talk shows, church PA interface, and more
- Can connect to an optional JK Audio Guest Module for remote control and dialing without an auxiliary telephone.
- Optional RA2 rackmount accessory holds two units in a 1U rack space

JK Audio Telephone Taps

New Bluetooth wireless tap! The **Daptor Three** audio interface offers Bluetooth wireless as well as balanced XLR and unbalanced 3.5 mm connections to let you send and receive audio through your cell phone. It also works great with any laptop that has a wireless headset connection! Ruggedly built, yet weighing just 7 ounces, it runs on a single 9-volt battery.

The non-Bluetooth **Daptor Two** lets you connect any mixer to the 2.5 mm headset jack on your wireless phone. This passive adaptor features balanced XLR and unbalanced 1/4" jacks (you may use either the XLR input or 1/4" input, not both). You can send and receive audio from your mixer or recorder through your cell phone.

The **Daptor One** converts the 2.5mm headset jack on your wireless cellular phone to a modular phone line jack. This RJ-11 jack connects directly to any JK Audio RemoteMix series mixer.

Connect the JK Audio **THAT1** or **THAT2** between your telephone and handset for quick access to audio in and out of the telephone. THAT1 has RCA I/Os. THAT2 adds XLR I/O and a handset selector switch.

To record audio from your cellphone connect the **CellTap** between the 2.5 mm earpiece jack of your cellphone and your earpiece. It features a 3.5 mm audio output.

Use **QuickTap** between your standard telephone and handset for access to audio out of any telephone. Simply connect your audio equipment to the audio output jack.

VoicePath routes audio in and out of any telephone using your PC sound card. Use PC software to play your conversation right back into the phone line.
